

Line Tracer 02

- How to write Line Tracer in C -

Import Clock Library

-> Add Clock Library Files

Click "MyProject" to activate

Select "Add Files..."

Import Clock Library

- > Select "Clock.c" and "Clock.h"
- > Copy them to the project folder

hello world

- > Write a simple program which is printing "hello world!"
- > Run the program clicking the debug button

```
1#include "msp.h"
2#include "Clock.h"
3#include <stdio.h>
4
5void main(void)
6{
7    Clock_Init48MHz();
8    printf("hello world!\n");
9}
```

Enter the function name correctly.

hello world

-> You can see the output

1. Bitwise Operation

Byte, Bit

1 Byte = 8 Bit

$$2^8 = 256$$

Bitwise Operation

AND

$$1 \& 1 = 1$$

$$1 \& 0 = 0$$

$$0 \& 1 = 0$$

$$0 \& 0 = 0$$

XOR

$$1 \wedge 1 = 0$$

$$1 \wedge 0 = 1$$

$$0 \wedge 1 = 1$$

$$0 \wedge 0 = 0$$

OR

$$1 | 1 = 1$$

$$1 | 0 = 1$$

$$0 | 1 = 1$$

$$0 | 0 = 0$$

NOT

$$\sim 0 = 1$$

$$\sim 1 = 0$$

Bitwise Operation

1	0	1	1	0	1	1	1
---	---	---	---	---	---	---	---

AND

0	0	1	0	1	0	0	1
---	---	---	---	---	---	---	---

=

0	0	1	0	0	0	0	1
---	---	---	---	---	---	---	---

0b10110111

&

0b00101001

=

0b00100001

Bitwise Operation

?	?	?	?	?	?	?	?
---	---	---	---	---	---	---	---

AND

1	0	0	0	0	0	0	0
---	---	---	---	---	---	---	---

=

?	0	0	0	0	0	0	0
---	---	---	---	---	---	---	---

Extract specific bits

Bitwise Operation

?	?	?	?	?	?	?	?
---	---	---	---	---	---	---	---

AND

1	1	1	0	1	1	1	1
---	---	---	---	---	---	---	---

=

?	?	?	0	?	?	?	?
---	---	---	---	---	---	---	---

Setting a specific bit to 0

Bitwise Operation

?	?	?	?	?	?	?	?
---	---	---	---	---	---	---	---

OR

0	0	0	0	0	1	0	0
---	---	---	---	---	---	---	---

=

?	?	?	?	?	1	?	?

Setting a specific bit to 1

Register setting

?	?	?	?	?	?	?	?
---	---	---	---	---	---	---	---

Bitwise Operation Example

```
1#include "msp.h"
2#include "Clock.h"
3#include <stdio.h>
4
5void main(void)
6{
7    // Clock Initialization
8    Clock_Init48MHz();
9
10   // LED Init
11   P2->SEL0 &= ~0x07;
12   P2->SEL1 &= ~0x07;
13   P2->DIR |= 0x07;
14   P2->OUT &= ~0x07;
15
16   // Turn On LED
17   P2->OUT |= 0b00000001;
18 }
```

The LEDs on the board consist of P2.0, P2.1, and P2.2.

P2->OUT

?	?	?	?	?	?	?	?
---	---	---	---	---	---	---	---

0th bit

0th bit : 1 -> Turn On LED

0th bit : 0 -> Turn Off LED

Bitwise Operation Example

```
1#include "msp.h"
2#include "Clock.h"
3#include <stdio.h>
4
5void main(void)
6{
7    // Clock Initialization
8    Clock_Init48MHz();
9
10   // LED Init
11   P2->SEL0 &= ~0x07;
12   P2->SEL1 &= ~0x07;
13   P2->DIR |= 0x07;
14   P2->OUT &= ~0x07;
15
16   // Turn On LED
17   P2->OUT |= 0b00000001;
18 }
```

P2->OUT

0th bit

0th bit : 1 -> Turn On LED

0th bit : 0 -> Turn Off LED

Bitwise Operation Example

```
5 void main(void)
6 {
7     // Clock Initialization
8     Clock_Init48MHz();
9
10    // LED Init
11    P2->SEL0 &= ~0x07;
12    P2->SEL1 &= ~0x07;
13    P2->DIR |= 0x07;
14    P2->OUT &= ~0x07;
15
16    // Turn On LED
17    P2->OUT |= 0b00000001;
18
19    // Wait 1s
20    Clock_Delay1ms(1000);
21
22    // Turn Off LED
23    P2->OUT &= 0b11111110;
24 }
```

P2->OUT

0th bit

0th bit : 1 -> Turn On LED

0th bit : 0 -> Turn Off LED

Bitwise Operation Example

```
5 void main(void)
6 {
7     // Clock Initialization
8     Clock_Init48MHz();
9
10    // LED Init
11    P2->SEL0 &= ~0x07;
12    P2->SEL1 &= ~0x07;
13    P2->DIR |= 0x07;
14    P2->OUT &= ~0x07;
15
16    // LED BLUE
17    P2->OUT |= 0b00000100;
18 }
```

P2->OUT

2nd 1st 0th

0th bit : RED

1st bit : GREEN

2nd bit : BLUE

Bitwise Operation Example

```
5 void main(void)
6 {
7     // Clock Initialization
8     Clock_Init48MHz();
9
10    // LED Init
11    P2->SEL0 &= ~0x07;
12    P2->SEL1 &= ~0x07;
13    P2->DIR |= 0x07;
14    P2->OUT &= ~0x07;
15
16    // LED BLUE
17    P2->OUT |= 0b00000100;
18    // LED GREEN
19    P2->OUT |= 0b00000010;
20
21    Clock_Delay1ms(1000);
22
23    // How about this
24    P2->OUT = 0b00000100;
25    P2->OUT = 0b00000010;
26 }
```

P2->OUT

2nd 1st 0th

0th bit : RED

1st bit : GREEN

2nd bit : BLUE

Bitwise Operation Example

```
5 void main(void)
6 {
7     // Clock Initialization
8     Clock_Init48MHz();
9
10    // LED Init
11    P2->SEL0 &= ~0x07;
12    P2->SEL1 &= ~0x07;
13    P2->DIR |= 0x07;
14    P2->OUT &= ~0x07;
15
16    while (1) {
17        if (P2->OUT & 0b0010) {
18            P2->OUT &= ~0b10;
19        } else {
20            P2->OUT |= 0b10;
21        }
22        Clock_Delay1ms(1000);
23    }
24 }
```

P2->OUT

0th bit : RED

1st bit : GREEN

2nd bit : BLUE

2. Debugging

How to Debug

To make LED Flashing

```
5 void main(void)
6 {
7     int i;
8
9     Clock_Init48MHz();
10
11     P2->SEL0 &= ~0x07;
12     P2->SEL1 &= ~0x07;
13     P2->DIR |= 0x07;
14     P2->OUT &= ~0x07;
15
16     i = 1;
17     while (1) {
18         P2->OUT |= i;
19
20         i <<= 1;
21         if (i == 0x1000) i = 1;
22         Clock_Delay1ms(1000);
23     }
24 }
```

Red -> (1s) -> Green -> (1s) -> Blue -> (1s) -> Red -> ...

Logging

```
#include "msp.h"
#include "Clock.h"
#include <stdio.h>

void main(void)
{
    int i;

    Clock_Init48MHz();

    P2->SEL0 &= ~0x07;
    P2->SEL1 &= ~0x07;
    P2->DIR |= 0x07;
    P2->OUT &= ~0x07;

    i = 1;
    while (1) {
        P2->OUT |= i;
        printf("P2->OUT : %x\n", P2->OUT);

        i <= 1;
        if (i == 0x1000) i = 1;
        Clock_Delay1ms(1000);
    }
}
```

Expected Result

P2->OUT : f9
P2->OUT : fa
P2->OUT : fc
P2->OUT : f9
P2->OUT : fa
...

Actual Result

P2->OUT : f9
P2->OUT : fb
P2->OUT : ff
P2->OUT : ff
P2->OUT : ff
...

Debugger

```
10
11 P2->SEL0 &= ~0x07;
12 P2->SEL1 &= ~0x07;
13 P2->DIR |= 0x07;
14 P2->OUT &= ~0x07;
15
16 i = 1;
17 while (1) {
18     P2->OUT |= i;|
19
20     i <<= 1;
21     if (i == 0x1000)
22         Clock_Delay1ms(1
23     }
24 }
25
```

Debugger

Debugger

The screenshot displays the Code Composer Studio (CCS) debugger interface. The top-left pane shows the project structure for 'MyProject [Code Composer Studio - Device Debugging]', with the target device 'Texas Instruments XDS110 USB Debug Probe/CORTEX_M4_0 (Suspended - HW Breakpoint)'. The top-right pane shows the 'Variables' window, which contains a table of variables:

Name	Type	Value	Location
i	int	1	0x2000FFF8

The bottom pane shows the source code for 'main.c'. The code is as follows:

```
12 P2->SEL1 &= ~0x07;  
13 P2->DIR |= 0x07;  
14 P2->OUT &= ~0x07;  
15  
16 i = 1;  
17 while (1) {  
18     P2->OUT |= i;  
19  
20     i <= 1;  
21     if (i == 0x1000) i = 1;  
22     Clock_Delay1ms(1000);  
23 }  
24 }
```

Line 18 is currently selected, indicating the program is paused at this point.

4. Assignment

Bitwise Operation Example

Make the LED

Red -> (3s) -> **Blue** -> (2s) -> **Green** -> (1s) -> **Red** -> ...

Try changing the LED color in the order of Colors should not overlap!

Deadline: ~ 9/27 11:59 PM

Submit : LMS

You can discuss or talk in groups

Only one member of the group needs to submit.

You can submit it in file *.C when you submit it.

Getting Started with Practice
When you're done, be sure to
return it.
